

Pielietojums

ESSVE pilnas vītnes kokskrūves HG paredzētas lielākajai daļai montāžas darbu iekštelpās — kokam, skaidu plāksnēm, finierim, plastmasai, dibeljiem u. c.

Apraksts

Skrūves izgatavotas no rūdīta oglekļa tērauda, spīdīgi cinkotas, iekštelpām. Skrūves galā ir 1 šķiedras grieznis, kas samazina plaisu veidošanos un ieskrūvēšanas griezes mo-

mentu koka materiālos. Skrūves galviņas apakšējā daļa ir gluda, tāpēc iespējams, piemēram, pieskrūvēt eņģes, nesabojājot materiālu. ESSVE pilnas vītnes kokskrūves HG atbilst CE prasībām EN 14592. TX uzgalis.

Montāža

leteicamais apgriezīenu skaits: 400-1200 apgr./min.

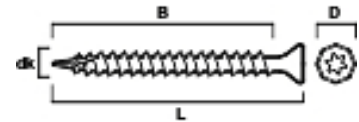

Tehniskie parametri

Materiāls	Rūdīts tērauds SAE C1022
Virsmas apstrāde	Spīdīgi cinkota 5µm
Korozijizturības klase	C1

Kokskrūves HG, pilna vītne, koniska galviņa. Spīdīgi cinkotas

Kokskrūves HG, spīdīgi cinkotas
